

Two things to know about your planner

A short reference for keeping the shared planner running and letting other coaches in. No coding needed — both jobs are done in the Firebase console.

1 The 7-day pause

Your planner runs on Firebase's free plan. To save resources, Firebase automatically **pauses** any project that receives no activity for 7 days in a row. Your data is never lost — the project just goes to sleep until you wake it.

WHEN YOU'D NOTICE IT

During the season, with coaches opening the planner most weeks, you'll likely never hit this. It typically only happens over a long break — for example, an off-season with nobody opening the site for over a week. If it's paused, you'll open the planner and find that signing in fails or sessions won't load.

This is not a breakage

A paused project looks broken but isn't. Nothing is deleted, nothing is charged. It simply needs to be woken up, which takes about 30 seconds.

HOW TO WAKE IT UP

1. Go to `console.firebase.google.com` and sign in with your Google account.
2. Open your **rugby-planner** project.
3. If it's paused, you'll see a banner or a message saying the project is paused, with a button to resume it. Click the **resume / reactivate** button (in French: **Réactiver** or **Reprendre**).
4. Wait around 30 seconds. Once it's active again, reload your planner — sign-in and sessions work as normal.

Tip to avoid it entirely

Simply opening and signing into the planner once a week counts as activity and keeps it awake. If you're heading into a quiet period, a quick weekly visit prevents the pause.

2 Adding a coach later

Only approved coaches can sign in and use the planner. The list of approved coaches lives in one place: your Firestore **security rules**. To let a new coach in, you add their email to that list. It takes about a minute.

Before you start

You'll need the exact Google account email the new coach will sign in with. It must be typed exactly and in lowercase — a typo means they won't get access.

STEP BY STEP

1. Go to `console.firebase.google.com` and open your **rugby-planner** project.
2. In the left menu, click **Firestore**.
3. At the top of the Firestore panel, click the **Règles** ("Rules") tab.
4. You'll see the rules text. Find the list of emails inside the square brackets `[ ]`.
5. Add the new coach's email to the list. Put a **comma** after every email except the last one. (See the example below.)
6. Click **Publier** ("Publish").
7. Tell the new coach to open the planner and sign in with that Google account. They're in.

WHAT THE LIST LOOKS LIKE

Before — just you:

```
&& request.auth.token.email.lower() in [
  "you@gmail.com"
]
```

After — you plus a new coach (note the comma after the first email):

```
&& request.auth.token.email.lower() in [
  "you@gmail.com",
  "newcoach@gmail.com"
]
```

The two rules to remember

Every email is wrapped in "quotes" and written in lowercase. Every email needs a , after it *except the last one*. Get these two right and it always works.

REMOVING A COACH

Same place, reverse action: delete that coach's line from the list (and tidy up any leftover comma so the last email has none after it), then click **Publier** again. They lose access immediately.

FRENCH LABELS YOU'LL SEE

Firestore	The database (left menu)
Règles	Rules (the tab where the coach list lives)
Publier	Publish (saves your change)
Réactiver / Reprendre	Reactivate / Resume (wakes a paused project)
